No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                               Score

or the present sequence is that of a single chain Fv (scrv) derivative of antibody 193/AD3, comprising the heavy (vn) and light (vn) chain variable regions of 193/AD3 joined by an artificial, flexible linker to 193/AD3 with the scrv was obtained by PcR amplification of chuka for 193/AD3 vn and vn, regions and cloning in vertex place. 193/AD3 is neamly so of anti-inman factor in (TRI)/ACC traveled Factor IX (FIX) and the scrv was done in the preceding activity of the screen of the screen of the screen of the screen of the screen of the screen of the screen of the screen of the screen of the screen of the screen of the screen of the screen of the screen of the screen of the screen of the screen of the screen of the screen of the screen of the screen of the screen of the screen of the screen of the screen of the screen of the screen of the screen of the screen of the screen of the screen of the screen of the screen of the screen of the screen of the screen of the screen of the screen of the screen of the screen of the screen of the screen of the screen of the screen of the screen of the screen of the screen of the screen of the screen of the screen of the screen of the screen of the screen of the screen of the screen of the screen of the screen of the screen of the screen of the screen of the screen of the screen of the screen of the screen of the screen of the screen of the screen of the screen of the screen of the screen of the screen of the screen of the screen of the screen of the screen of the screen of the screen of the screen of the screen of the screen of the screen of the screen of the screen of the screen of the screen of the screen of the screen of the screen of the screen of the screen of the screen of the screen of the screen of the screen of the screen of the screen of the screen of the screen of the screen of the screen of the screen of the screen of the screen of the screen of the screen of the screen of the screen of the screen of the screen of the screen of the screen of the screen of the screen

       New isolated polymucleotides and encoded polypeptides - used to develop products for treating e.g. inflammatory diseases, infections, immunological disorders, autoimmune diseases, allergies
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      activating activity. Administration of the antibodies or their derivatives leads to an increase in the proceagilant activity of griza, even in the presence of FVIII a inhibitors. This allows for rapid blood cogulation even in the absence of FVIII or FVIII, an in the case of FVIII inhibitor patients. The antibodies or their derivatives are used in a Calamed pharmacountient composition for treating patients with blood compulation disorders, especially hemosphills a and hemorrhagic dathresis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence is that of complementarity determining region 3 (CRR3) of the heavy chain of an antibody expressed by mouse hybridose 193/ND3. This antibody has anti-Pactor IX (FIX) or anti-activated Pactor IX (FIXA) activity. It is an example of anti-FIX/FIX antibodies of the invention. Such antibodies and their derivatives (including those that comprise the present CRR3 peptide) have Factor VIII at [FVIIIa] confactor activity or FIXR
                                                                     WPI; 1998-414099/35.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This is the amino acid sequence of the cDNA clone Bol-like (HACT29), used in the method of the invention. The products of the clone can be used for treating conditions associated with abnormal expression of the polypoptides. They can be used for a g. treating chronic inflammatory diseases, immunological disorders, autoimmune diseases, inflammatory diseases, various altergies, and as anti-linfectious agents. The products can also be used for detection and dispossis.

The present sequence is one such phage transfected cell library. The present sequence is one such immunopolypeptide. The immunopolypeptides have binding specificity or envelope glycopordein E2 and nonstructural process NS3 of hepatitis C virus (HCT). E2 glycoprocein is believed to be responsible for target cell binding and contains neutralising spitopes, while NS3 is thought to get involved in the replication of HCV. The immunopolypertides are useful con taggressing and treating a patient having or suspected to be having the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                       identifying and isolating mutants of actinomycetales and for identifying compounds that have antibiotic activity. The method is used to identify mutants of microorganisms, preferably an actinomycetales, such as M. ubberculosis, M. botts, M. lepras M. avum, M. intracellulatire and M. paratuberculosis, M. botts, M. lepras M. avum, M. intracellulatire and It is especially useful for identifying loci involved in pathogenicity. It is useful in constructing vaccines. The method can be used to screen multiple librarise concurrently. It can screen librarise of different organisms or different examins of the same organism. The present progenicit is encoded by a gene which is disrupted by the insertion of the 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to 18 to

The method comprises constructing a library with insertions in genes and/or regulatory regions of the organisms of interest, when the insertion contains a teg and/or a transpose associated with a teg. The mitarts are identified by hybridistic or the tags to known sequences. The method is useful for treating an individual suffering from a mycobacterial infection supposed to an infectious Mycobacterium, or having both of the productions Mycobacterium, or having to the productions Mycobacterium, or having to the productions Mycobacterium. It is also useful for any organism of the productions Mycobacterium.
                                                                                                                                                                                                                                                                                                                                                     Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Example 8; Fig 5A; 159pp; English.

                                           The invention relates to a human monoclonal antibody or its antigen binding fragments which exhibit immunological binding affilintly for a hepartitis C vitrus (BCY) Et antigen comprising an amino acid sequence bomalogous to the binding portion of a human antibody Fib molecule from a combinatorial antibody library. The vaccine composition comprising the antibodies of antigen binding fragments against BUY ELD or Exhibits of the physraciable region is useful in treating or preventing BUY intestion in a mobject. Sequences METS13-AB076568 represent human monoclonal antibodies against HCV EL antigen.
                                                                                                                                                                                                                                                                                                                                                                                        Disclosure; Page 56; 64pp; English
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Vaccine comprising a human monoclonal antibody against hepatitis C virus (HCV) El or E2 antigen, useful for treating or preventing HCV
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human; HCV; hepatitis C virus; El antigen; monoclonal antibody; vaccine; hepatotropic; Fab; hypervariable region; E2 antigen; antibody.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 (MBS57737-ABB72072).
The sequence data for this parent did not form part of the printed the sequence data for was obtained in electronic format directly from MIDO at ftp-wipo.in/Pub/pub/shed_pet_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to an isolated nuclaic acid detection respent capable of detecting 1000 or more genes from Prospobila. The invention is useful in developmental biology and in shufdering cell signalling and call-cell interactions in higher elevances for the development of insecticides, therapeutics and pharmacoutical drugs. The invention discloses genomic DNA sequences (MELIGITA ANGJOSII), expressed DNA sequences (MELIGITA ANGJOSII), expressed DNA sequences (MELIGITA CONTRACTION ANGJOSII).

                                                                                                                                                                                                                                                                                    The present invention relates to human immunopolypeptides, produced by a phage transfected cell library. The present sequence is one such immunopolypeptide. The immunopolypeptides have binding specificity for envelope 3/proprocein E2 and nonstructural protein N33 of hapatitis C virus HUTO; E2 glycoprocein is believed to be responsible for tearer cell binding and contains neutralising spitopes, while N31 is thought to ge involved in the replication of RV. The immunopolypeptides are useful you diagnosing and treating a patient having or suspected to be having your diagnosing and treating a patient having or suspected to be having
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New human immunopolypeptide with binding specificity for certain of heparitis of (HRV), for diagnosing or treating patients having or suspected o having HCV infection.
                                                                                                                                                                                                                                     Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          are useful for treating a mammalian subject, or as nutritional sources or supplements. These are useful in gene therapy, particularly for treating wounds, burns or ulcers, Alzheimer's disease, Huntington's disease,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to 446 newly isolated polymucleotide seguances. The activity of polymucleotides of the invention may be described as, unlineary, neuroprosective, immunomodulator, cycostatic and anti-inflamancy, coppositions comprising mucleic acids of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New polypeptides and their encoded proteins, useful as nutritional sources or supplements, or in gene therapy, particularly for treating wounds, Alzheimer's disease, amyotrophic lateral sclerosis, cancer or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              cytostatic; anti-inflammatoxy; gene thexapy; mutritional supplement; wound; burn; ulcer; Alzdeimer's disease; Huntington's disease; amyortophic lateral sclerosis; autoimmune disorder; inflammation;
                                                                                                                                   ABB63366 standard; Protein; 291 AA.
                                                                                                                                                                                                                                                                                                                                       Sequence
                                                                                                                                                                                                                                                                                                                                                                NOTE: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIFO at ftp.wipo.int/pub/published_pot_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                              ampotrophic lateral sclerosis, autoimmume disorders, cancer or inflammation. The nucleic acids and polypoptides are also useful in idiagnostic and research methods. The sequences given in records aparais4. Appriss4. Appriss4.

The inventuesful in developmental biology and in elucidating cell signalling cell-circle in the inventue for the development of insecticides, therapeutics and pharmaceurical cury. The invention discloses genomic DNA sequence (BALIGITS-BALIGITS) copressed DNA sequences (BALIGITS-BALIGITS).
                                                                                          Sequence
                                                                                                                                                                               The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Disclosure; SEQ ID NO 16890; 21pp + Sequence Listing; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    23-MAR-2000; 2000US-191637P

The C. ablicans inclaic acid molecules encoding the polypeptides of the invention may be used as probes and primers for detecting homologous mudalcia catd molecule sequences. The polypeptides and mucleic acid molecules and compounds identified as selectively modulating the expression of the polypeptides, may be used as medicaments or for the preparation of a medicament to treat C.ablicans sections of the polypeptides and not previously the preparation of the polypeptides are sectionally in Alls patients and to treat Cablicans associated diseases have the polyperides to treat C.ablicans associated diseases have seen side effects and less contity than previously used methods such as the solve especially suitable for the polyperides.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to isolated polynucleoride (I) and probles, coplymeriae (II) acquames. (II) is useful as hybridisation probes, coplymeriae (III) acquames. (II) is useful in hybridisation of (III). The complying, and in recombinant production of (III). The coplymeriae (III) are also used in disagnostics as supressed sequence tags are for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving copy in the complex of the copy techniques of complex problement (II) and its binding partners are useful in medical copy in the copy of the polyment of the copy in the copy of the polyment (II) and its binding partners are useful for treating timedical copy in the copy of the polymeria (III) and its binding partners are useful for treating the copy of the polymeriae and polymeriae expressed or biological activity. The polymeriae is the polymeriae and polymeriae of the copy of the polymeriae of the copy of the polymeriae of the copy of the polymeriae of the copy of the polymeriae of the copy of the polymeriae of the copy of the copy of the polymeriae of the copy of the copy of the polymeriae of the copy of the polymeriae of the copy of the copy of the polymeriae of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the copy of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Matches

The present invention describes substantially purified human proceins creating frame. GRYX, where X is 4-1484 (see Table 1 cm in the specification). ABMINFGS to ABMINFGS encode the human GRYX CC proteins given in ABMINFGS to ABMINFGS encode the human GRYX corrections are useful for treating or preventing a pathology associated with an OREX-associated disorder: In humans, and in the manifacture of a medicament for treating a syndrome associated with OREX-associated disorder: OREX polymouthoride expenses can be used in the sequences can be used in the expenses of the process of the proc at ftp.wipo.int/pub/published_pct_sequences.
